AI Analysis Summary

You've demonstrated excellent use of semantic HTML elements and clear content structure! To take it further, remove the nested `<main>` element to ensure only one main landmark exists, improving accessibility for screen reader users.

Priority recommendations:

- 1 Remove the inner `<main>` element and replace it with a `<div>` or `<section>` to avoid nested main landmarks.
- 2 Ensure there is only one `<main>` element per page to help assistive technologies identify the primary content area correctly.
