AI Analysis Summary

You've demonstrated strong use of semantic HTML elements like `<section>`, `<figure>`, and proper heading levels which helps organize content clearly. To take it further, avoid nesting multiple `<main>` elements, use heading tags instead of paragraphs for section titles, and enhance table semantics with headers or captions.

Priority recommendations:

- 1 Remove the nested `<main>` element and use a `<div>` or `<section>` with appropriate class instead to maintain a single main content area.
- 2 Replace `<p>` elements used as section headings (e.g., 'Preparation time') with appropriate heading tags like `<h2>` or `<h3>` to improve document structure.
- 3 Add a `<thead>` with header cells or a `<caption>` to the nutrition table to clarify its purpose and improve semantic meaning.

WARNING **Structure & Semantics** **AI Detected** 1 occurrence

Uses nested `<main>` elements which breaks the rule that a document should have only one main content area. This causes confusion for browsers and assistive technologies, impacting content understanding and navigation.

```
<main>
  <div class="wrapper">
    <figure>
      
    </figure>

    <main class="text-content">

WARNING **Structure & Semantics** **AI Detected** 1 occurrence

Uses `<p>` elements as section headings (e.g., 'Preparation time') instead of proper heading tags. This weakens the document's information hierarchy, making it harder for users and search engines to understand content structure.

```
<section class="preparation">
  <p class="ter-heading">Preparation time</p>
  <ul class="preparation-list">
```

WARNING **Structure & Semantics** **AI Detected** 1 occurrence

Uses `<td>` elements directly inside `<tbody>` without a `<thead>` or `<caption>` in the nutrition table. This reduces semantic clarity and makes it harder for users and tools to understand table purpose and headers.

```
<table>
  <tbody><tr>
    <td class="paragraph">Calories</td>
    <td class="paragraph p-bold qty">277kcal</td>
  </tr>
```

Strengths 2

Structure & Semantics

Uses semantic elements like `<section>`, `<figure>`, `<img>` with alt text, `<ol>` for ordered instructions, and `<ul>` for lists, which improves content meaning and accessibility.

Structure & Semantics

Proper use of heading levels with `<h1>` for main title and `<h2>` for subsections, creating a clear content hierarchy.
